

Pollution Dispersion from KeyState Gas Synthesis Plant

This map shows the modeled relative average annual concentration of primary air pollutants from the proposed KeyState Gas Synthesis Plant in Clearfield County, PA. The meteorological data used covered 5/1/2023 - 5/1/2024.

Modeling was conducted assuming constant emissions uniformly distributed across 20-40m above ground level at 41.12920, -78.10414.

This map provides an understanding of the geographical distribution of primary pollutants on a relative scale. It does not provide specific levels of pollutants expected at any location. Secondary pollution formation has not been modeled.
